12 FEBRUARY 2023

To Whom it May Concern,

I am currently seeking a job change. The following is to provide a general understanding of who I am professionally.

I am a software developer with extensive experience in web 2.0 full stack test driven development utilizing Ruby on Rails, and React. The testing tools I use are RSpec, and Jest. I also have some experience with Express.js and web 3.0 smart contract development for the Flow blockchain with Cadence. The deployment platforms I am familiar with are Heroku and Fly.io. I also have a solid understanding of continuous integration using GitHub Actions and CircleCi. A more comprehensive list is present on my resume but these are some of the technologies I am most familiar with. As many other good developers, I am always learning and experimenting with new tools and technologies.

I graduated in 2020 with a bachelor's degree in Software Engineering from the University of Ottawa. Whether I am developing complex projects, mentoring junior developers, or being the project manager on an application, I always strive to not only meet expectations but also make a positive impact on my organization as well as the end users.

In my career, I have always been passionate about web 2.0 development, and the processes around it. I believe my independence, responsibility, honesty, openness to criticism, and excellent communication skills make me a valuable asset to any team. In various performance reviews, I have received recognition for my communication skills, time management, and ability to handle responsibility.

I am a highly driven individual who is committed to putting in the hard work necessary to achieve my goals. My introverted nature allows me to be very independent and focus deeply on tasks. I am also a meticulous planner, always considering multiple scenarios and anticipating potential challenges to ensure that I am well prepared for any situation. With my strong work ethic and attention to detail, I am confident in my ability to bring success to any team I am a part of.

I am currently seeking a development position that offers opportunities for growth, and access to senior developers. Ideally this would be a web development role but I am open to hearing any opportunity I could be successful in. My goal is to continue growing professionally and to work with a larger team. I am eager to bring my skills, knowledge, and unique qualities to a new company.

Sincerely,

Christopher Francis
